Table I.A.1. Rainfall and Civil Conflict Onset

Panel A: MSS(2004) Data (1979-1999)								
	MSS(2004) [with extraterritorial conflicts]				without extraterritorial conflicts [as in JG(2009)]			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
Rainfall Growth, t	-0.063 (0.044)	-0.063 (0.048)			-0.020 (0.037)	-0.020 (0.040)		
Rainfall Growth, t-1	-0.120* (0.062)	-0.120* (0.068)			-0.106* (0.059)	-0.106 (0.064)		
Log Rainfall, t			-0.073 (0.078)	-0.073 (0.086)			-0.034 (0.062)	-0.034 (0.068)
Log Rainfall, t-1			-0.026 (0.069)	-0.026 (0.075)			-0.075 (0.047)	-0.075 (0.051)
Log Rainfall, t-2			0.156** (0.068)	0.156** (0.074)			0.126** (0.063)	0.126* (0.069)
Country Fixed Effects	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Country Time Trends	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Small Sample Adjustment	No	Yes	No	Yes	No	Yes	No	Yes
Observations	555	555	555	555	571	571	571	571

Panel B: 1979-2009 (Latest Data)								
	with extraterritorial conflicts [as in MSS(2004)]				without extraterritorial conflicts [as in JG(2009)]			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
Rainfall Growth, t	-0.037 (0.029)	-0.037 (0.031)			-0.006 (0.026)	-0.006 (0.028)		
Rainfall Growth, t-1	-0.052 (0.033)	-0.052 (0.036)			-0.047 (0.029)	-0.047 (0.031)		
Log Rainfall, t			0.005 (0.041)	0.005 (0.044)			0.017 (0.036)	0.017 (0.038)
Log Rainfall, t-1			0.023 (0.042)	0.023 (0.044)			-0.030 (0.039)	-0.030 (0.042)
Log Rainfall, t-2			0.074 (0.052)	0.074 (0.056)			0.050 (0.049)	0.050 (0.052)
Country Fixed Effects	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Country Time Trends	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Small Sample Adjustment	No	Yes	No	Yes	No	Yes	No	Yes
Observations	873	873	873	873	906	906	906	906

***, **, * represent significance at 1%, 5%, and 10%, respectively. The left-hand side variable is an indicator variable capturing civil conflict onset. The method of estimation is least squares. The values in brackets are heteroskedasticity robust standard errors clustered at the country level. Columns (2), (4), (6) and (8) report standard errors using the STATA small-sample adjustment; for more on this adjustment see p.7 in the main paper “Economic Shocks and Civil Conflict: A Comment”. MSS (2004) refers to Miguel, Satyanath, and Sergenti (2004); JG (2009) to Jensen and Gleditsch (2009); see the main paper for references. In contrast to MSS (2004), JG (2009) exclude participation in extraterritorial civil conflicts from the analysis. The conflict data for 1979-2009 come from UCPD/PRIO Armed Conflict Database Version 4-2010 and the rainfall data from the GPCP Combined Precipitation Dataset Version 2.1.

Table I.A.2. Rainfall and Civil Conflict Incidence: MSS(2004) Data (1979-1999)

Panel A: With Extraterritorial Conflicts [as in MSS(2004)]										
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
	(LS)	(LS)	(GMM)	(LS)	(LS)	(LS)	(LS)	(GMM)	(LS)	(LS)
Rainfall Growth, t	-0.024 (0.040)	-0.024 (0.043)	-0.017 (0.043)	-0.025 (0.040)	-0.025 (0.043)					
Rainfall Growth, t-1	-0.122** (0.048)	-0.122** (0.052)	-0.123** (0.049)	-0.129*** (0.048)	-0.129** (0.051)

***, **, * represent significance at 1%, 5%, and 10%, respectively. The left-hand side variable is an indicator variable capturing civil war incidence (civil war is defined as a civil conflict with more than 1000 annual battle-related deaths). The method of estimation is least squares or system-GMM. The values in brackets are heteroskedasticity robust standard errors clustered at the country level. Columns (2), (5), (7) and (10) report standard errors using the STATA small-sample adjustment; for more on this adjustment see p.7 in the main paper "Economic Shocks and Civil Conflict: A Comment". MSS (2004) refers to Miguel, Satyanath, and Sergenti (2004); JG (2009) to Jensen and Gleditsch (2009); see the main paper for references. In contrast to MSS (2004), JG (2009) exclude participation in extraterritorial civil conflicts from the analysis. The conflict data come from UCPD/PRIO Armed Conflicts Version Version 4-2010 and the rainfall data from the GPCP Combined Precipitation Dataset Version 2.1.

***, **, * represent significance at 1%, 5%, and 10%, respectively. The left-hand side variable is an indicator variable capturing civil war incidence (civil war is defined as a civil conflict with more than 1000 annual battle-related deaths). The method of estimation is least squares or system-GMM. The values in brackets are heteroskedasticity robust standard errors clustered at the country level. Columns (2), (5), (7) and (10) report standard errors using the STATA small-sample adjustment; for more on this adjustment see p.7 in the main paper "Economic Shocks and Civil Conflict: A Comment". MSS (2004) refers to Miguel, Satyanath, and Sergenti (2004); JG (2009) to Jensen and Gleditsch (2009); see the main paper for references. In contrast to MSS (2004), JG (2009) exclude participation in extraterritorial civil wars from the analysis.

***, **, * represent significance at 1%, 5%, and 10%, respectively. The left-hand side variable is an indicator variable capturing civil war onset (civil war is defined as a civil conflict with more than 1000 annual battle-related deaths). The method of estimation is least squares. The values in brackets are heteroskedasticity robust standard errors clustered at the country level. Columns (2), (4), (6) and (8) report standard errors using the STATA small-sample adjustment; for more on this adjustment see p.7 in the main paper "Economic Shocks and Civil Conflict: A Comment". MSS (2004) refers to Miguel, Satyanath, and Sergenti (2004); JG (2009) to Jensen and Gleditsch (2009); see the main paper for references. In contrast to MSS (2004), JG (2009) exclude participation in extraterritorial civil conflicts from the analysis. The conflict data for 1979-2009 come from UCPD/PRIOR Armed Conflict Database Version 4-2010 and the rainfall data from the GPCP Combined Precipitation Dataset Version 2.1.

Table I.C.5. Rainfall and Civil War Incidence: MSS(2004) Data (1979-1999)

***, **, * represent significance at 1%, 5%, and 10%, respectively. The left-hand side variable is an indicator variable capturing civil war incidence (civil war is defined as a civil conflict with more than 1000 annual battle-related deaths). The method of estimation is least squares or system-GMM. The values in brackets are heteroskedasticity robust standard errors clustered at the country level. Columns (2), (5), (7) and (10) report standard errors using the STATA small-sample adjustment; for more on this adjustment see p.7 in the main paper “Economic Shocks and Civil Conflict: A Comment”. MSS (2004) refers to Miguel, Satyanath, and Sergenti (2004); JG (2009) to Jensen and Gleditsch (2009); see the main paper for references. In contrast to MSS (2004), JG (2009) exclude participation in extraterritorial civil conflicts from the analysis. The conflict data come from the UCPD/PRIO Armed Conflict Database Version 4-2010 and the rainfall data from the GPCP Combined Precipitation Dataset Version 2.1.

***, **, * represent significance at 1%, 5%, and 10%, respectively. The left-hand side variable is an indicator variable capturing civil conflict incidence. The method of estimation is least squares or system-GMM. The values in brackets are heteroskedasticity robust standard errors clustered at the country level. Columns (2), (5), (7) and (10) report standard errors using the STATA small-sample adjustment; for more on this adjustment see p.7 in the main paper "Economic Shocks and Civil Conflict: A Comment". MSS (2004) refers to Miguel, Satyanath, and Sergenti (2004); JG (2009) to Jensen and Gleditsch (2009); see the main paper for references. In contrast to MSS (2004), JG (2009) exclude participation in extraterritorial civil conflicts from the analysis. The conflict data come from the UCPD/PRIO Armed Conflict Database Version 4-2010 and the rainfall data from the GPCP Combined Precipitation Dataset Version 2.1.

Table II.C.3. Rainfall and Civil War Onset 1979-2008

	with extraterritorial wars [as in MSS(2004)]				without extraterritorial wars [as in JG(2009)]			
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
Rainfall Growth, t	-0.020 (0.024)	-0.020 (0.026)			-0.003 (0.022)	-0.003 (0.024)		
Rainfall Growth, t-1	0.005 (0.020)	0.005 (0.021)			0.017 (0.014)	0.017 (0.015)		
Log Rainfall, t			-0.037 (0.039)	-0.037 (0.042)			-0.028 (0.031)	-0.028 (0.033)
Log Rainfall, t-1			0.007 (0.032)	0.007 (0.034)			-0.009 (0.029)	-0.009 (0.031)
Log Rainfall, t-2			-0.034 (0.033)	-0.034 (0.035)			-0.054* (0.028)	-0.054* (0.030)
Country Fixed Effects	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Time Fixed Effects	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Country Time Trends	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Small Sample Adjustment	No	Yes	No	Yes	No	Yes	No	Yes
Observations	997	997	997	997	1030	1030	1030	1030

***, **, * represent significance at 1%, 5%, and 10%, respectively. The left-hand side variable is an indicator variable capturing civil war onset (civil war is defined as a civil conflict with more than 1000 annual battle-related deaths). The method of estimation is least squares. The values in brackets are heteroskedasticity robust standard errors clustered at the country level. Columns (2), (4), (6) and (8) report standard errors using the STATA small-sample adjustment; for more on this adjustment see p.7 in the main paper “Economic Shocks and Civil Conflict: A Comment”. MSS (2004) refers to Miguel, Satyanath, and Sergenti (2004); JG (2009) to Jensen and Gleditsch (2009); see the main paper for references. In contrast to MSS (2004), JG (2009) exclude participation in extraterritorial civil conflicts from the analysis. The regressions based on the JG definition of civil conflict rely on the same database as the corresponding regressions based on MSS’s definition. The conflict data come from the UCPD/PRIO Armed Conflict Database Version 4-2010 and the rainfall data from the GPCP Combined Precipitation Dataset Version 2.1.

***, **, * represent significance at 1%, 5%, and 10%, respectively. In columns (1) to (5) the left-hand side variable is civil conflict incidence. In columns (6) to (10) it is civil war incidence. The method of estimation is least squares or system GMM. The values in brackets are heteroskedasticity robust standard errors clustered at the country level. Columns (2), (5), (7) and (10) report standard errors using the STATA small-sample adjustment; for more on this adjustment see p.7 in the main paper “Economic Shocks and Civil Conflict: A Comment”. The conflict data come from UCPD/PRIOR Armed Conflicts Version 4-2010. The rainfall database is the GPCP Combined Precipitation Dataset Version 2.1. The temperature database is reported in Burke et al. (2009); see the main paper for references. The original source is the Climatic Research Unit of the University of West Anglia.
